
(A) Two channels on one landscape
breeding value z_1
breeding value z_2
C_1
C_2
$\mathcal{A}_g \approx 0.06$
$\mathcal{A}_g \approx 0.86$
$\mathcal{A}_g \approx 0.90$
$\mathcal{A}_g \approx 0.01$
$\mathcal{A}_g \approx 0.88$
$\mathcal{A}_g \approx 0.88$
(B) Narrow cloud ($\sigma = 0.38$, $\mathcal{A}_g \approx 0.80$)
(C) Broad cloud ($\sigma = 1.05$, $\mathcal{A}_g \approx 0.34$)
$\ell(z)$ true surface
$L = b\,\Delta z$ tangent
curvature load V_{quad}
population $\Delta z \sim \mathcal{N}(0, \sigma^2)$
log-fitness $\ell(z)$
breeding value z
$\bar{z}$
