
(A) State variables and local predictability $\mathcal{A}_g(t)$
lag $d(t)$
variance $G(t)$
$\mathcal{A}_g(t)$
α
Act I
Act II
Act I
lag d or variance G
$\mathcal{A}_g(t)$
time (generations)
(B) Logit trajectory $\mathcal{L}(t)$ — integral of $r(t)$
$\mathcal{L}_\alpha$
logit $\mathcal{L}(t) = \ln(\mathcal{A}_g/(1-\mathcal{A}_g))$
time (generations)
(C) Rate diagnostic $r(t)$ decomposed by biological process
$|d| < \delta$ (gap)
rate $r(t) = \dot{\mathcal{L}}$
$r_{\text{motion}} = 2\dot{\theta}/d$
$r_{\text{curv}} = -sG$
r_{other} (rec+mut+drift)
$r(t)$ total
time (generations)
